MacOpener® 4.1

OPEN MACINTOSH FILES AND DISKS IN WINDOWS. INSTANTLY.

The easiest way to share business documents, graphics, publishing, audio, video, web and any other kinds of "cross-platform" files between a Macintosh and a Windows PC.

1. Copy Files to and from Macintosh disks

With MacOpener, you can access Macintosh disks from the Windows desktop or any program's "Open" or "Save As" menu.

Just double-click on the drive containing the Macintosh disk, and all the contents of the disk will be available to you.

Any Macintosh disk looks just like any Windows disk in your computer. The only difference is that you will see "(Mac)" in the title bar of the disk window indicating that you are accessing a Macintosh disk.

MacOpener even retains the long Macintosh file names and adds the appropriate icon and Windows extension to the file when copying from a Macintosh disk. When copying files to a Mac disk, MacOpener writes the correct Macintosh information to the file. This way, the Mac can recognize the file and use it properly.

2. Read Macintosh CD-ROMs on your PC

Many CD-ROMs now ship as Macintosh only or have both Macintosh and Windows partitions on them. Clip Art CD-ROMs are examples of this. With MacOpener, you can read any files from these types of CD-ROMs.

3. Format disks as Macintosh right on your Windows PC

If you need to send Windows files to Macintosh users, you can format disks as Macintosh right on your PC. Simply right-click on the drive containing the disk you wish to format. Once completed, Macintosh users will be able to use your disks without ever knowing they came from a Windows PC.

Get access to all Macintosh formatted media on a Windows PC, including:

HD 1.44 MB Floppies
Iomega Zip
Iomega ZipPlus
Iomega Jazz
Iomega Bernoulli
SyQuest SparQ
SyQuest EZ-135
SyQuest EZ Flyer
Optical Disks
CD-ROMs
Macintosh and Mac OS Extended format (HFS+) drives and all other SCSI, IDE and Parallel Port devices

Minimum System Requirements

- Windows 95, 98 or NT 4.0
- 2 MB hard disk space
- Low density/double density (400/800K) Mac floppy disks not supported
- Supports Intel based NT only
